JavaScript	Angular	Node JS	React JS
Express	Ionic	Next.js	MongoDB
MySQL	Jenkins	Travis CI	Git
Docker	Kubernetes		

LANGUAGES

English: Professional Proficiency

Spanish: Native Proficiency

PROFESSIONAL EXPERIENCE

Fullstack React/.NET developer

FocustApps LLC - SoftwareMind | Remote | May 2023 - Present

As a Fullstack Developer at FocustApps, I worked exclusively on the OCR Project, integrating Microsoft OCR to automate invoice processing and streamline data extraction for multiple clients. Below are my main contributions to the project:

- Integration of Microsoft Optical Character Recognition (OCR) to analyze client invoices and extract relevant information for review by the client's administrator.
- Customization of the OCR system to support three clients (TFS, TrueSource, and Miner) with unique requirements while maintaining a shared core architecture.
- Enabled support for Word, JFIF, and Excel documents alongside PDF invoices by adapting Azure Logic Apps and integrating Adobe PDF Services Connector.
- Training and integration of a new custom model using Azure AI Document Intelligence to extract additional invoice data for a TFS client.
- Development of a .NET time-triggered function to synchronize Purchase Order numbers with the Salesforce instance every hour.

Contact: Luis Macovei - kmeyers@focustapps.com

Angular and Node developer

Number8 | Remote | May 2021 - May 2023

- Gallery Project - Implementation of a gallery of internal applications and systems of the client, for the purpose of internal use.
- Pipeline Manager Project - Applying mayor changes requested on the PLM project.
- Delivers Project - Applying mayor changes requested on the Delivers project.
- Bitbucket Server integration with Jenkins to use a Pipeline to execute PLM API Job's.
- Creation of a shared docker-compose.yml to define the services used by project's Gallery and Delivers.
